

Blizzard 1230 I/II Jumpers

MAPROM

If memory is installed on the Blizzard 1230-II you can load Kickstart into the faster RAM to speed up the execution of operating system functions. If the MAPROM jumper is removed, Kickstart will be automatically copied over to the RAM. If the jumper is installed Kickstart will be executed on the ROM.

FPU-Clock

In position 2-3 the co-processor is operated synchronously, with the central processor clock. If you want to use a co-processor with another clock rate this jumper must be set to position 1-2. For asynchronous operation a second oscillator must be installed.

RAM Configuration

Bank1	Bank2	Jumper	total
none	none		none
1MB	none		1MB
2MB	none		2MB
4MB	none		4MB
8MB	none		8MB
16MB	none		16MB
32MB	none		32MB
1MB	1MB		2MB
2MB	1MB		3MB
4MB	1MB		5MB
8MB	1MB		9MB
16MB	1MB		17MB
32MB	1MB		33MB
2MB	2MB		4MB
4MB	2MB		6MB
8MB	2MB		10MB
16MB	2MB		18MB
32MB	2MB		34MB
4MB	4MB		8MB
8MB	4MB		12MB
16MB	4MB		20MB
32MB	4MB		36MB
8MB	8MB		16MB
16MB	8MB		24MB
32MB	8MB		40MB
16MB	16MB		32MB
32MB	16MB		48MB
32MB	32MB		64MB
